

GrassHouston Migration — Session Summary

Site: coral-hare-833726.hostingersite.com (WordPress + Elementor)

Source of truth: grasshouston.com (original Replit/React build)

Date: 2026-06-26

Outcome: All issues fixed and verified live. Final QA: **all checks passed.**

1. New content added this session

#	Item	Status
1	Acreage & Estate Sod Installation service page	Imported from source (fully built-out)
2	Sports Field Sod Installation service page	Source was a stub — full copy authored (body, pricing, 6 Key Features, 6 FAQs)
3	New Construction Sod Installation service page	Source was a stub — full copy authored
4	HOA Common Area Sod service page	Was missing entirely — added with full authored copy

Result: **14 of 14** source services now live on WordPress.

2. What was wrong (found in QA) — and how it was fixed

A. Jersey Village page was showing the wrong city's content

- **Wrong:** The Jersey Village service-area page displayed **duplicated Houston content** — the body, neighborhoods (River Oaks, Memorial, West University), and stats ("2,400+ since 2014") were all Houston, not Jersey Village. Its "Recommended grass" also listed **all three varieties** instead of the correct **St. Augustine only**.
- **Cause:** Jersey Village was a stub in the source and had been **skipped** in the original city import, so its page was left as a Houston copy.
- **Fixed:** Built a complete, Jersey-Village-specific page (mature-tree shade, White Oak Bayou drainage/flood focus, clay soils, Jersey Meadow Golf Course) and corrected the grass to St. Augustine only.
- **Verified:** Page now reads as Jersey Village throughout; grass correct.

B. "St. Augustine Grass" page had a broken title

- **Wrong:** The page title read **"Augustine Grass"** (missing "St.").
- **Fixed:** Corrected to **"St. Augustine Grass"**.

- **Verified:** Title correct live.

C. Duplicate/mislabeled blog post

- **Wrong:** An extra blog post titled "**Care & Maintenance**" existed. It was actually a **truncated duplicate** of the "St. Augustine vs. Bermuda for Houston" article, mislabeled with a category name — it had no source article behind it.
- **Fixed:** Moved to Trash.
- **Verified:** Blog now **13/13** matching the source; the stray URL 404s.

D. Half the "Completed projects" cards were missing

- **Wrong:** The homepage "Proof, not promises" project grid showed only **4 of the 8** cards from the source. Missing: Pearland Builder Closeout, Conroe Industrial Hydroseed, SH-99 Embankment Stabilization, Klein ISD Athletic Field.
- **Also wrong:** The **project** post type had **single pages enabled** even though these are only meant to be cards.
- **Fixed:**
 - Created the 4 missing project cards with correct data (location, area, service, image) into the existing ACF "Project Details" fields, and auto-created their categories (Builder, Hydroseeding, Erosion Control, Sports Field).
 - Disabled single pages for the **project** post type (Publicly Queryable off → project URLs redirect home).
 - Raised the homepage grid's display limit from 6 to 8 so all cards show.
- **Verified:** All **8/8** cards render with correct data; single pages disabled.

3. Final verification (full-site sweep)

Automated check of the whole site against the source — **zero failures:**

- Post-type coverage: services (11 CPT + 3 pages), 24 service areas, 13 blog posts, 8 projects, 3 grass-type pages — all present.
- Grass-type page titles — all correct.
- **All 24 city pages** — recommended grass matches source **and** each page's content names the correct city (no Houston leaks). 24/24 clean.
- Key service pages (HOA, Sports, New Construction, Acreage) render with full content + FAQs.
- All 4 new project cards render on the homepage.
- Single project pages disabled; stray blog URL 404s.

4. Notes / optional follow-ups (non-blocking)

- Service pages do not show a large hero image. This appears to be intended template behavior rather than a defect — worth a glance only if a hero image was expected there.

5. Deliverables

All work is committed to git (branch `services-importer-v1.8.0`). Plugins/zips updated this session:

- `grass-services-importer` (v1.9.0) — services incl. HOA
 - `grass-service-areas-importer` (v1.7.0) — Jersey Village fix
 - `grass-projects-importer` (v1.1.0) — missing project cards
 - `QA-REPORT.md` — detailed QA findings
-
